

Different data, different learning jobs

01 Dance reference

Time + joint targets → reward and tracking baseline, not BC labels

02 Swing teacher

Privileged simulator state → labels paired with raw 61D observations

03 BC and DAgger

Fit actor means; student-visited states expand supervised coverage

04 PPO in all four cases

Current stochastic actor → fresh transitions → GAE → actor + critic

05 Independent evaluation

Frozen ONNX mean → full physical episode → gates and saved video
